COMPUTE CREDIT INDEX RESEARCH

Illustrative Borrowing Base Covenant & Compliance Certificate

CRI-H100 | March 2026

ILLUSTRATIVE EXAMPLE — FOR REFERENCE AND DISCUSSION PURPOSES ONLY

This document does not constitute legal advice, a credit commitment, or a regulated benchmark publication. CCIR rate values are hypothetical. Consult counsel before incorporating any reference rate into a credit agreement.

PART I — CREDIT AGREEMENT EXCERPT

The following provisions are illustrative excerpts from a hypothetical senior secured revolving credit agreement between a GPU compute operator ("Borrower") and an institutional lender ("Administrative Agent"). Cross-references to other agreement sections are bracketed.

Article I — Defined Terms

Defined Term	Definition
"CCIR"	Compute Credit Index Research, an independent benchmark administrator that publishes the Compute Rate Indices (CRI) in accordance with the IOSCO Principles for Financial Benchmarks. CCIR is not affiliated with any GPU marketplace, cloud provider, or lending institution.
"CRI-H100"	The Compute Rate Index — H100, as published by CCIR at computecreditindex.com, representing the median noninterruptible on-demand rental rate for NVIDIA H100 SXM5 80GB GPU instances across CCIR's qualifying provider universe, expressed in U.S. dollars per GPU per hour, calculated over a trailing seven (7) calendar-day observation window. The CRI-H100 applicable to any Borrowing Base Certificate shall be the most recently published daily rate as of the Determination Date.
"Reference Rate"	The CRI-H100 as of the applicable Determination Date.
"GPU Collateral Value"	As of any Determination Date, the value assigned to Eligible GPU Collateral for purposes of the Borrowing Base, calculated as: (GPU Unit Count × Reference Rate × Contracted Utilization Rate × Annual GPU Hours) ÷ GPU Capitalization Rate. See §7.02(b).
"GPU Capitalization Rate"	Twenty-eight percent (28%) per annum (the "Base Capitalization Rate"), representing the agreed yield rate applied to annualized spot GPU rental income to derive capitalized collateral value. If a Generation Convergence Event has occurred under §7.04 and remains in effect, the Capitalization Rate shall increase to thirty-five percent (35%) for all subsequent Calculation Dates until the Generation Spread returns to or above the Generation Spread Threshold for two consecutive Calculation

Defined Term	Definition
	Dates. Reviewed annually; may be adjusted by mutual written agreement of the Borrower and Administrative Agent.
"Utilization Assumption"	Seventy-two percent (72%), representing a conservative estimate of productive utilization in an on-demand spot deployment, accounting for scheduling gaps, platform downtime, and the conditions of on-demand spot market redeployment. The Administrative Agent may adjust the Utilization Assumption downward (but not upward) if market data supports a lower figure, acting in good faith and in a commercially reasonable manner. The Utilization Assumption is fixed at 72% and does not vary with the Borrower's actual reported utilization.
"Annual GPU Hours"	8,760 hours per year (365 days × 24 hours per day), unadjusted for scheduled maintenance.
"Advance Rate"	Sixty-five percent (65%) of GPU Collateral Value for H100 SXM5-grade Eligible GPU Collateral.
"Borrowing Base"	As of any Determination Date, the sum of: (a) the product of (i) GPU Collateral Value and (ii) the Advance Rate, minus (b) any reserves established by the Administrative Agent pursuant to §2.04(c).
"Determination Date"	The last Business Day of each calendar month, or any Business Day on which the Administrative Agent requests an interim Borrowing Base Certificate pursuant to §7.02(e).
"Generation Spread"	(CRI-B200 Reference Rate minus CRI-H100 Reference Rate) divided by CRI-H100 Reference Rate, expressed as a percentage. The Generation Spread measures the premium that next-generation B200-grade compute commands over H100-grade compute in the on-demand spot market. A Generation Spread Trigger Event shall occur if the Generation Spread falls below twenty-five percent (25%) — the "Generation Spread Threshold" — for two consecutive Determination Dates, indicating material compression of the B200 premium and potential erosion of H100 training-tier status.
"Borrowing Base Deficiency"	The amount, if any, by which Outstanding Credit Exposure exceeds the Borrowing Base as of any Determination Date.
"Rate Cap Scenario"	An analytical scenario, calculated as of each Determination Date, in which the Reference Rate is assumed to be reduced by twenty-five percent (25%), thirty-five percent (35%), and fifty percent (50%), respectively, for purposes of illustrating sensitivity of GPU Collateral Value to compute rate compression.

Article VII — Affirmative Covenants

Section 7.02 Borrowing Base Maintenance.

(a) Borrowing Base Maintenance. Borrower shall ensure that, as of each Determination Date, the Outstanding Credit Exposure does not exceed the Borrowing Base (a "Borrowing Base Deficiency"). If a Borrowing Base Deficiency exists as of any Determination Date, Borrower shall, within five (5) Business Days thereafter, either

(i) repay Revolving Loans in an aggregate amount sufficient to eliminate such Borrowing Base Deficiency, or (ii) deliver to the Administrative Agent additional Eligible Collateral with a GPU Collateral Value sufficient to eliminate such Borrowing Base Deficiency.

(b) Borrowing Base Calculation. The GPU Collateral Value shall be calculated as follows:

GPU Collateral Value = (N × R × U × H) ÷ C

Where: N = GPU Unit Count of Eligible GPU Collateral; R = Reference Rate (CRI-H100, $/GPU/hr); U = Utilization Assumption (72%, fixed); H = Annual GPU Hours (8,760); C = GPU Capitalization Rate (28% baseline; 35% if a Generation Convergence Event is in effect under §7.04).

The Borrowing Base equals the GPU Collateral Value multiplied by the Advance Rate, less any reserves.

(c) Borrowing Base Certificate. Borrower shall deliver to the Administrative Agent a completed Borrowing Base Certificate in the form of Exhibit F ("Borrowing Base Certificate") on each Determination Date, and within two (2) Business Days of any request by the Administrative Agent. Each Borrowing Base Certificate shall (i) identify the applicable CRI-H100 as published by CCIR, (ii) set forth the GPU Unit Count and hardware specifications of Eligible GPU Collateral, (iii) calculate the GPU Collateral Value and Borrowing Base, and (iv) include the Rate Cap Scenario analysis. Borrower acknowledges that CCIR is an independent benchmark administrator and that CRI-H100 rates are determined solely by CCIR without input from Borrower or Administrative Agent.

(d) Rate Cap Scenario Reporting. Each Borrowing Base Certificate shall include Rate Cap Scenario analysis demonstrating the Borrowing Base at CRI-H100 reductions of 25%, 35%, and 50%. If the Borrowing Base under the 35% Rate Cap Scenario falls below the Outstanding Credit Exposure, Borrower shall notify the Administrative Agent within one (1) Business Day and provide an updated collateral management plan within fifteen (15) Business Days.

(e) Interim Certificates. The Administrative Agent may, upon three (3) Business Days' notice to Borrower, require delivery of an interim Borrowing Base Certificate on any Business Day if (i) the CRI-H100 has declined more than fifteen percent (15%) from the level used in the most recent Borrowing Base Certificate, (ii) the Generation Spread has fallen below the Generation Spread Threshold (25%) for two consecutive Determination Dates, (iii) any data source constituting more than twenty percent (20%) of the CCIR source universe has been suspended or delisted by CCIR, or (iv) the Administrative Agent in its reasonable credit judgment determines that a material change in GPU compute market conditions has occurred.

(f) Benchmark Discontinuation. If CCIR ceases to publish CRI-H100 for a period of five (5) or more consecutive Business Days, or if CCIR materially changes the methodology underlying CRI-H100 without a 30-day public comment period, the Administrative Agent and Borrower shall negotiate in good faith within thirty (30) days to designate a successor benchmark. Until a successor is designated, GPU Collateral Value shall be determined by the Administrative Agent using the last published CRI-H100 rate, subject to a 0.25% per month reduction factor for each month of unavailability.

Section 8.09 GPU Collateral Minimum Source Coverage.

Borrower shall promptly notify the Administrative Agent if CCIR publishes a CRI-H100 value accompanied by a source_coverage flag of REDUCED or SUSPENDED, indicating that fewer than the standard number of qualifying data sources contributed to the index calculation. Such notification shall be delivered within one (1) Business Day of CCIR's publication of such flag.

PART II — EXHIBIT F TO CREDIT AGREEMENT

BORROWING BASE CERTIFICATE

Borrower:	Hypothetical GPU Compute LLC ("Borrower")
Administrative Agent:	[Lender / Agent Bank]
Determination Date:	March 31, 2026 ("Determination Date")
Certificate Date:	April 2, 2026
Certifying Officer:	[Name], Chief Financial Officer

Schedule 1 — CCIR Reference Rate Verification

Parameter	Value	Source / Notes
Index Name	**CRI-H100**	Compute Credit Index Research (CCIR)
GPU Model	NVIDIA H100 SXM5 80GB	Noninterruptible on-demand
Observation Window	7-day trailing (Mar 25 – Mar 31, 2026)	Per §3.1, CCIR Methodology v1.0.0
CRI-H100 (Determination Date)	**$2.18 / GPU / hr**	Published: computecreditindex.com
Number of Contributing Sources	6 of 6 (Full coverage)	source_coverage: STANDARD
Methodology Version	v1.0.0 (March 2026)	IOSCO-aligned; no material revisions since last Certificate
Prior-Month CRI-H100 (Feb 28, 2026)	$2.26 / GPU / hr	Month-over-month change: –3.5% (below 15% threshold)
Generation Spread (CRI-B200 − CRI-H100) ÷ CRI-H100	145.4% (($5.35 − $2.18) ÷ $2.18)	Well above 25% threshold — no Generation Convergence Event; Base Cap Rate (28%) applies

Schedule 2 — Eligible GPU Collateral Inventory

Facility / Location	GPU Model	Units	Interconnect	Status	Eligible?
Dallas TX-1	H100 SXM5 80GB	3,200	NVLink / SXM5	Operational	**Yes**
Chicago IL-1	H100 SXM5 80GB	2,400	NVLink / SXM5	Operational	**Yes**
Phoenix AZ-2	H100 SXM5 80GB	1,800	NVLink / SXM5	Operational	**Yes**

Facility / Location	GPU Model	Units	Interconnect	Status	Eligible?
Portland OR-1 (under maintenance)	H100 SXM5 80GB	600	NVLink / SXM5	Maintenance	No[1]
Total Eligible (N):	**7,400 GPUs**				
Total Eligible GPU Unit Count (N):				**7,400**	

[1] Portland OR-1 units excluded from Eligible GPU Collateral pending completion of scheduled maintenance (expected April 8, 2026). Units will be added to the Eligible pool upon return to operational status per §5.01(c) of the Security Agreement.

Utilization Assumption (U) — Fixed per §7.02

Per the Utilization Assumption definition, U = 72.0% (fixed). This rate is not derived from Borrower's actual reported utilization. It represents a conservative estimate of productive utilization in an on-demand spot redeployment scenario — the conditions relevant to a lender's LTV calculation. Actual Borrower utilization is reported separately in the Operator Report and does not affect this calculation.

Schedule 3 — Borrowing Base Calculation

Line Item	Formula / Reference	Amount
(A) Eligible GPU Unit Count (N)	Schedule 2	7,400
(B) CRI-H100 Reference Rate (R)	CCIR, March 31, 2026	$2.18 / hr
(C) Utilization Assumption (U)	Fixed per §7.02; Definitions	72.0%
(D) Annual GPU Hours (H)	365 × 24 hrs	8,760 hrs
(E) Gross Annual Revenue per GPU (B × C × D)	$2.18 × 72.0% × 8,760	$13,750 / GPU
(F) Total Gross Annual NOI (A × E)	7,400 × $13,750	$101.7M
(G) GPU Capitalization Rate (C)	§7.02(b); Base Rate (no convergence event)	28.0%
(H) GPU Collateral Value (F ÷ G)	**$101.7M ÷ 28%**	**$363.4M**
(I) Advance Rate	§7.02(b); H100 SXM5 grade	65.0%
(J) Gross Borrowing Base (H × I)	$363.4M × 65%	$236.2M
(K) Administrative Agent Reserves	§2.04(c)	($0)
(L) BORROWING BASE (J + K)	**J + K**	**$236.2M**

Schedule 4 — Compliance Test & LTV

Test	Result	Status
Outstanding Credit Exposure (M)	$148.0M	—
Borrowing Base (L)	$236.2M	—

Test	Result	Status
Borrowing Base Deficiency (M – L, if positive)	$0 (No Deficiency)	✓ COMPLIANT
LTV Ratio (M ÷ H GPU Collateral Value)	$148.0M ÷ $363.4M = 40.7%	✓ COMPLIANT (max 80%)
Available Capacity (L – M)	$88.2M	—

Schedule 5 — Rate Cap Scenario Analysis (§7.02(d))

	Base Case	–25% Stress	–35% Stress	–50% Stress
CRI-H100 ($/GPU/hr)	$2.18	$1.64	$1.42	$1.09
GPU Collateral Value	$363.4M	$272.5M	$236.2M	$181.7M
Borrowing Base (65% advance)	$236.2M	$177.2M	$153.5M	$118.1M
Outstanding ($148.0M)	$148.0M	$148.0M	$148.0M	$148.0M
Borrowing Base Cushion / (Deficiency)	**+$88.2M**	**+$29.2M**	**+$5.5M**	**($29.9M)**
LTV Ratio	40.7%	54.3%	62.7%	**81.5% ⚠**
Status	✓	✓	✓ Marginal	⚠ Breach

Note: The –35% scenario produces $5.5M of headroom ($153.5M BB vs. $148.0M outstanding, 62.7% LTV). The –50% scenario generates a $29.9M Borrowing Base Deficiency at an 81.5% LTV, breaching the 80% LTV covenant. The 28% base cap rate means the base-case LTV is 40.7% — a materially wider cushion than a 35% cap rate would produce. If a Generation Convergence Event were in effect, the cap rate would step to 35%, reducing GPU Collateral Value to $290.6M and the Borrowing Base to $188.9M — still compliant at $148M outstanding, but with reduced cushion in stress scenarios.

§7.02(d) Notification — Required

The Borrowing Base under the –35% Rate Cap Scenario ($153.5M) exceeds Outstanding Credit Exposure ($148.0M) by only $5.5M — a cushion of 3.7% of outstanding. Pursuant to §7.02(d), Borrower hereby notifies the Administrative Agent and will deliver an updated Collateral Management Plan within fifteen (15) Business Days of this Certificate.

OFFICER CERTIFICATION

The undersigned, a duly authorized officer of Hypothetical GPU Compute LLC ("Borrower"), hereby certifies to the Administrative Agent and each Lender as of the Determination Date set forth above that:

(i) I have reviewed the terms of the Credit Agreement and the calculations set forth in this Borrowing Base Certificate;

(ii) No Default or Event of Default exists as of the Determination Date, nor would result from the making of any Revolving Loan requested on the date hereof;

(iii) The GPU Unit Count set forth in Schedule 2 is accurate and complete; all units listed as Eligible GPU Collateral satisfy the eligibility criteria set forth in the Security Agreement as of the Determination Date;

(iv) The Contracted Utilization Rate is based on Borrower's own operational records for the trailing 90-day period; Borrower has no knowledge of any material adverse change in utilization rates that would affect the calculation in Schedule 3;

(v) The CRI-H100 rate of $2.18/GPU/hr used in Schedule 3 was obtained directly from computecreditindex.com as published by CCIR for the Determination Date. The Utilization Assumption of 72.0% is the fixed rate specified in the Credit Agreement and is not derived from Borrower's actual operational data. Borrower acknowledges that CCIR is an independent benchmark administrator and that Borrower has no affiliation with, control over, or influence on CCIR or its published rates;

(vi) The Rate Cap Scenario analysis in Schedule 5 was calculated in good faith in accordance with §7.02(d), and the §7.02(d) notification requirement has been triggered as described therein;

(vii) All representations and warranties of Borrower set forth in Article V of the Credit Agreement are true and correct in all material respects as of the date hereof.
